

Committing Basics Exercise

1. Create a new folder called `Shopping`
2. Initialize a new git repo inside of the `Shopping` folder (make sure you're not already inside of a Git repo!)
3. Make a new file called `yard.txt`
4. Make another new file called `groceries.txt`
5. Make a commit that includes both empty files. The message should be "create yard and groceries lists"
6. In the `yard.txt` file, add the following changes:

```
- 2 bags of potting soil - 1 bag of worm castings
```

7. In the `groceries.txt` file, add the following:

```
- 4 tomatoes - 6 shallots - 1 fennel bulb
```

8. Make a new commit, including **ONLY** the changes from the `groceries.txt` file. The commit message should be "add ingredients for tomato soup"

9. Make a second commit including ONLY the changes to the `yard.txt` file. It should have the commit message "add items needed for garden box"

10. Next up, add the following line to the end of `groceries.txt`

- couple of seed potatoes

11. In the `yard.txt` file, change the first line so that it says "3 bags of potting soil" instead of "2 bags of potting soil"

- 3 bags of potting soil - 1 bag of worm castings

12. Make a commit that includes the changes to BOTH files. The message should read "add items needed to grow potatoes"

13. Use a Git command to display a list of the commits. You should see 4!
